Products

SITI Cash (processing, transport, storage of cash and valuables)

Integrated Information System (ERP) for SIFs (Financial Investment Companies) and Assets Fund Management Companies

RegisNET (document management, business flows, and more)

DividendeNET (dividends distribution, squeeze out, etc.)

IPONET (IPO subscription, capital increase, etc.)

Quick transfers (MoneyGram certified solution)

SITI Factoring (complete factoring solution)

SITI Cash

Record keeping of input / output cash and valuables in the territorial network, allowing to view at any time the treasury balance and online tracking of the operational activities.

Any cash entry / exit in / from the system is done exclusively on the basis of the demand recorded by a Cash Coordination Special Department, while the users from cash processing centers finalizes the request.

Monitoring online transport routes, use of PDAs.

Automated processing through the interfaces with cash counting machines, including counters for meal tickets and other internal systems and client applications.

The operating / reporting flows are optimized and provides an easy use and a very good control of the operations and of the cash / valuables processed.

SITI Cash is a web application implemented in 20 national centers with 300 users, being available 24/24 hours, 365 days/year.

SITI Cash (cont.)

Cash forecast for ATM and MFM (multi-functional machines) based on statistical models

Forecast computation on cassette level

Individual (per terminal) parameterization for very specific conditions (special events, salary payment interval, holidays, etc.)

Combined tool for cash monitoring and cash forecast for terminals (ATMs, MFMs) including technical events

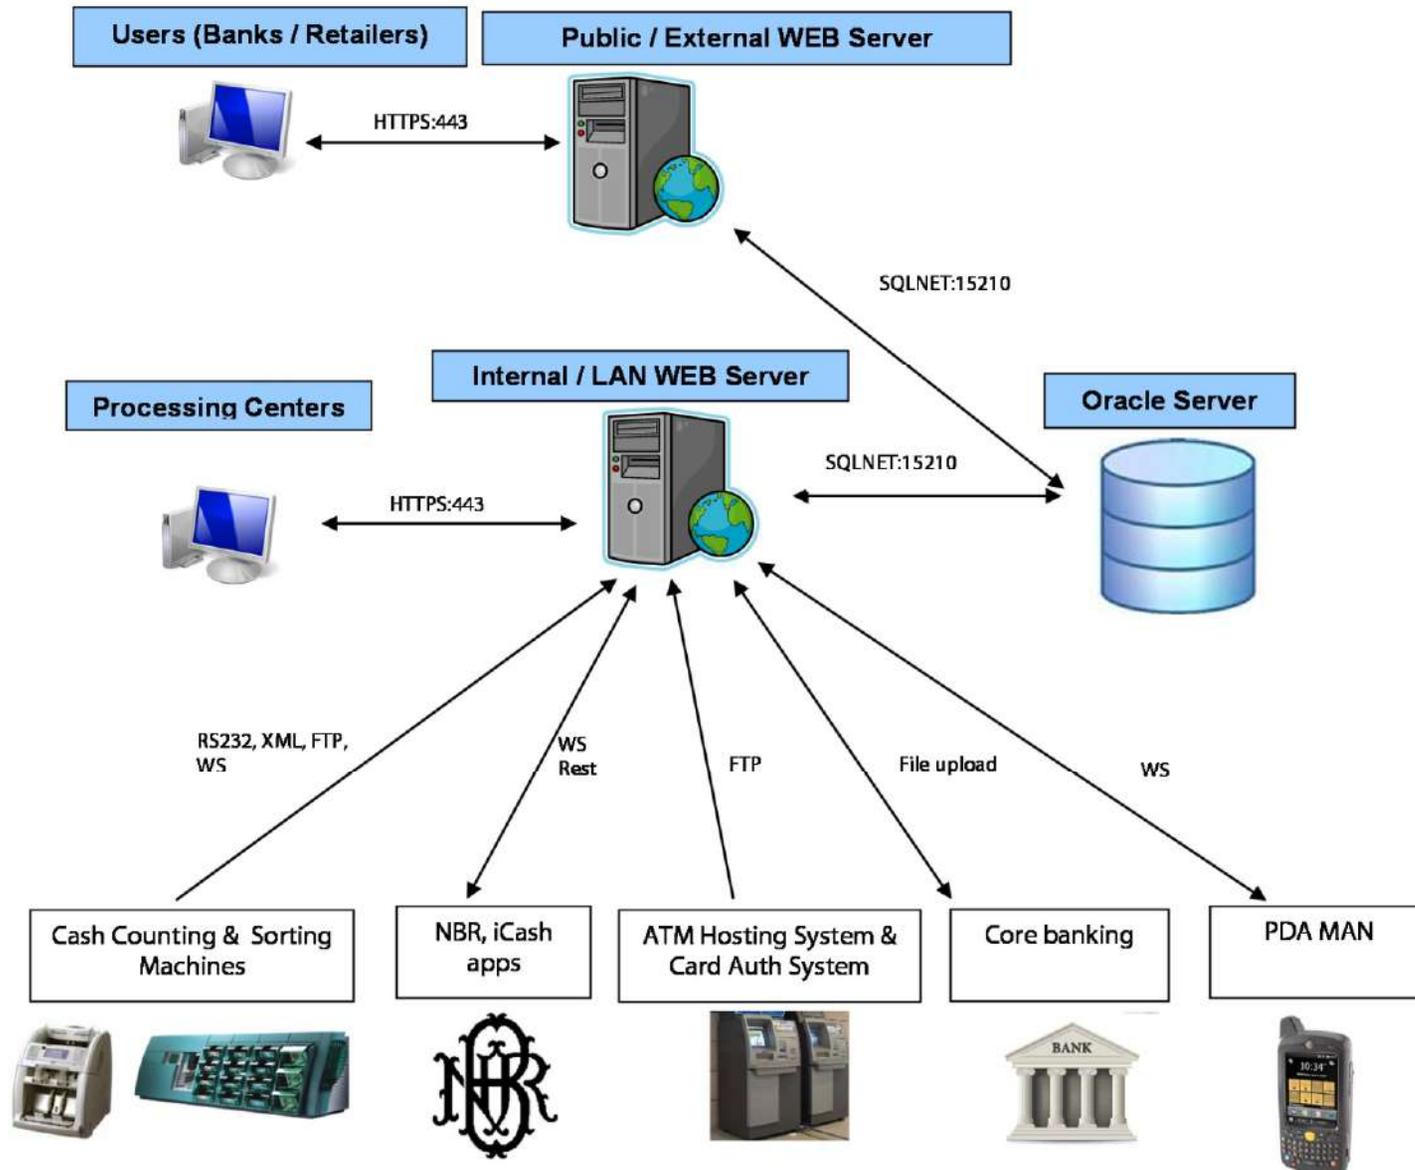

Automated terminals reconciliation tool with automated booking into core banking accounts

Three levels of reconciliation for ATMs: cash vs counters; counters vs transactions, transactions vs accounting entries.

Automated order posting for FLM interventions (integrated with technical monitoring system for ATM network)

The SITI Cash application architecture

IntegratedERP for Financial Investment Companies

Integrated information system for resources and flows management dedicated to investment and assets management companies

Modular system designed to cover all the business units activities and flows:

- Portfolio management
- Operations
- Accounting
- Simulation
- Shareholders management
- Risk management & Portfolio optimization
- Operational risk monitoring

RegisNET

Document Management

Document Registry

Configurable business flows that can operate for certain types of documents

Complaints handling, cards and pins distribution, pre-printed / blank debit instruments (checks and promissory notes)

Web application, operating with 600 branches and 4,000 users

PrintOP module: downloadable Microsoft Windows platform devices application to print payment orders DCY and FCY

DividendeNET

Payment of dividends due to the shareholders through banking network for joint stock issuers

The shareholder is identified in the application through the personal identification code / unique registration code and receives a single document and a single amount of money cumulated for all issuers registered in the bank's portfolio

The application allows payments for many issuers, each issuer may require the distribution of dividends corresponding to previous years, and for a given year several types of amounts (i.e. SIF4 for 2011)

The application allows other types of payments, such as payments for squeeze-out procedure

Web application implemented in 600 branches and having 4000 users

IPONET

Subscription registration during the capital increases / public offerings of financial instruments

The subscription can be made using the territorial network of the banks and other distribution points agreed in the offer

Participants to the public offerings (brokers) can be connected in parallel with the banking network

Each entity has rights well defined and customized screens

Iponet has online interface with Arena – Bucharest Stock Exchange and core banking application

Web application implemented in 600 branches and having 4000 users

Quick transfers - MoneyGram

Quick money transfers worldwide using a dedicated operator (MoneyGram)

The connection with the fast funds operator is online, using the latest security technologies

The application is online also with the core banking application

Back-office module for tracking activity, reconciliation, audit, marketing

Web application implemented in 600 branches and having 4000 users

The only MoneyGram certified application in Romania

MoneyGram
International

Interfaces with other systems
